Summary

Blockchain and Web3 Developer with hands-on experience building and deploying decentralized applications on Ethereum. Completed an 8-week internship delivering three end-to-end DApps covering voting, NFT minting, and supply chain tracking. Proficient in Solidity, smart contract development, and React.js, with a focus on secure, gas-efficient on-chain logic.

Education

JSPM University, Pune 2025 – Present
Bachelor of Technology, Computer Science and Engineering (Artificial Intelligence and Machine Learning) – Lateral Entry

Government Polytechnic, Solapur 2022 – 2025
Diploma in Information Technology

Technical Skills

- **Blockchain / Web3:** Solidity, Smart Contracts, Ethereum, ERC-721, Hardhat, Ethers.js, Web3.js, MetaMask Integration
- **Programming Languages:** JavaScript, Solidity
- **Frontend:** React.js, HTML, CSS
- **Tools & Platforms:** Git, GitHub, Hardhat, MetaMask

Experience

SkillInfyTech IT Solutions Private Limited *May 2026 – Jul 2026 (3 mos)*
Blockchain Developer Intern *Pune, Maharashtra, India*

- Built and deployed 3 decentralized applications on Ethereum over an 8-week internship: a voting system, an NFT minting platform, and a supply chain tracker.
- Wrote and tested smart contracts in Solidity using Hardhat, focused on secure and gas-efficient on-chain logic.
- Integrated MetaMask wallet connectivity and Ethers.js across all three applications for on-chain interaction from the front end.
- Built the React.js and JavaScript front ends for each application to communicate with deployed smart contracts.

Projects

Decentralized Voting System *Solidity, Ethereum, Hardhat, Web3, JavaScript*
GitHub Repository

- Enforced one vote per wallet address via smart contract logic, preventing duplicate or fraudulent votes.
- Made vote counting transparent and tamper-proof by recording and tallying all votes on-chain.

NFT Minting Platform *Solidity, Hardhat, ERC-721, Ethers.js, MetaMask, JavaScript*
GitHub Repository

- Built an ERC-721 minting flow supporting both free (demo) and paid mints through MetaMask.
- Added a live NFT preview using Canvas and a real-time gallery of minted NFTs.

Supply Chain Tracking DApp *Solidity, Hardhat, Ethers.js, MetaMask, JavaScript, HTML, CSS*
GitHub Repository

- Recorded product registration and checkpoint-based tracking on-chain for full, tamper-proof history from manufacturing to delivery.
- Connected the tracker to MetaMask for real-time, wallet-verified status updates in a responsive UI.

Certifications

- Blockchain Developer Internship — SkillInfyTech IT Solutions Private Limited, Jul 2026 (Credential ID: SITS826069)
